

LOAD CONFIG FROM FILE & ENV VARS WITH VIPER

Backend Master Class
Lecture 12

WHY FILE?

WHY FILE?

DEVELOPMENT

Easily specify default configuration for local development and testing

WHY FILE?

DEVELOPMENT

Easily specify default configuration for local development and testing

WHY ENV VARS?

WHY FILE?

DEVELOPMENT

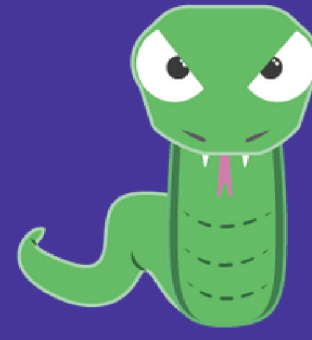

Easily specify default configuration for local development and testing

WHY ENV VARS?

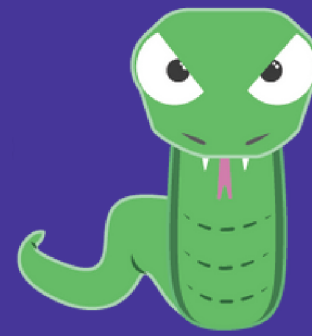

DEPLOYMENT

Easily override the default configurations when deploy with docker containers

WHY VIPER?

WHY VIPER?

Find, load, unmarshal config file

JSON, TOML, YAML, ENV, INI

WHY VIPER?

Find, load, unmarshal config file

JSON, TOML, YAML, ENV, INI

Read config from environment variables or flags

Override existing values, set default values

WHY VIPER?

Find, load, unmarshal config file

JSON, TOML, YAML, ENV, INI

Read config from environment variables or flags

Override existing values, set default values

Read config from remote system

Etc, Consul

WHY VIPER?

Find, load, unmarshal config file

JSON, TOML, YAML, ENV, INI

Read config from environment variables or flags

Override existing values, set default values

Read config from remote system

Etc, Consul

Live watching and writing config file

Reread changed file, save any modifications
